If you are diagnosed with a certain disease, you will be asked by a local public official—an epidemiologist—about everyone with whom you have had contact. The epidemiologist will talk to each person and ask them about their health. This is called contact tracing and is a core public health function.

- Contact tracing tracks and prevents the spread of disease.
- Epidemiologists find everyone who has been in contact with the sick person.
- Contacts are watched for symptoms for a certain number of days.

Your role, providing all contacts, is key to stopping the spread of disease.

1. PATIENT Isolated & Provided Care
   - Contact shows symptoms & is isolated, tested & provided care.
2. Patient asked about their contacts.
   - Contact shows symptoms & is isolated, tested & provided care.
3. Contacts will be watched for symptoms for a certain number of days.
   - Missed contact may spread disease to new contacts.
   - Contact shows no symptoms after a certain number of days.

Missed contact may spread disease to new contacts.

- Public health system works to eliminate missed contacts.
- Contact not at risk of developing the disease.

If no contacts, no further spread of the disease.

Cycle repeats until there are no new patients.

Local county contact information can be found at FloridaHealth.gov.

If you are diagnosed with a certain disease, you will be asked by a local public official—a professional trained in public health—about everyone with whom you have had contact. The professional will talk to each person and ask them about their health. This is called contact tracing and is a core public health function.
