Florida Health Office of Communications 08/07/18

WHAT IS VIBRIO VULNIFICUS (Vv)?

- Vv is a rare illness caused by bacteria commonly found in warm, brackish and salt water, and in shellfish during the summer months.

HOW CAN I GET IT?

- Eating raw or undercooked shellfish, particularly oysters.
- Exposing open wounds, cuts or scratches of the skin to brackish and salt water.

WHO IS AT RISK?

- People with weakened immune systems, particularly those with chronic liver disease.
- Healthy people may develop a mild infection.

WHAT ARE THE SYMPTOMS?

- Symptoms may include vomiting, diarrhea, abdominal pain or fever.
- A skin infection may lead to skin breakdown and skin ulcers.
- The bacteria can invade the bloodstream causing a severe and life-threatening illness with symptoms of fever, chills, decreased blood pressure (septic shock) and blistering skin lesions.

WHAT CAN I DO?

- Keep brackish and salt water away from open wounds.
- Wear protective shoes when walking on the beach to avoid cuts from shells and other objects.
- Do not eat raw shellfish, and cook shellfish thoroughly before eating.
- Avoid cross-contaminating ready-to-eat foods with raw shellfish and its juices.
