

A booster shot is administered to increase the immune response of people who have completed the recommended number of initial doses for a COVID-19 vaccine.

WHO CAN GET A COVID-19 BOOSTER SHOT?

Children and teens age 12–17 can **only** get a Pfizer booster shot.

Adults age 18 and older can choose the Pfizer, Moderna, or J&J COVID-19 vaccine for their booster shot **regardless** of which vaccine they initially received.

People should talk to their health care provider about whether a booster shot is appropriate for them.
