

Protect yourself & your customers.

Hepatitis A is on the rise in our area.

Wash your hands.

Get vaccinated.

Hepatitis A virus is in the feces of people who have the virus.

- If a person with the virus doesn't wash his or her hands after going to the bathroom, fecal matter can transfer to objects, food, drinks or drugs.
- When these things are shared, other people can unknowingly swallow the virus. If a person who has the virus comes in close contact with others—like during sex—the virus can spread.

Wash hands with soap and warm, running water for 20 seconds before you:

- Change kitchen tasks, put on disposable gloves, and handle or serve food.
- Prepare food, switch between working with raw food, ready-to-eat food, and food that isn't packaged.
- Touch clean tableware, utensils and take-out containers.
- Clean equipment.
- If you're sick, don't prepare food, and report your illness to your boss.

Hepatitis A can lead to serious liver problems, even death.

Contact your county health department for a free or low-cost vaccine, or call the hepatitis A information line, Mon.–Fri., 8 a.m.–5 p.m., toll free: 1-844-CALL-DOH (844-225-5364). Email: HepA@flhealth.gov.
